NO.107(1988)
JUNE 3, 1988

SOUTHLANDS MINING CORPORATION(SSM-V)

DRILLING RESUMES ON FRASERGOLD- Southlands Mining Corporation and Sirius Resource Corporation reported that 6 holes have been completed in the current \$1,100,000 two phase exploration program on the Frasergold property near Horsefly, B.C. The program includes closely spaced reverse circulation drilling with a view to proving up an open pit deposit with a target of 5,000,000 tons grading 0.05 oz.gold/t. Metallurgical work shows excellent recoveries with conventional methods can be expected. (See GCNL No.68 8Apr88 for property review).

Southlands succeeded earlier this year in obtaining a court injunction preventing Eureka Resources from taking any further property action. By completing a feasibility study, anticipated by the end of 1988, Southlands and Sirius can each earn a 25% interest with Eureka holding the remaining 50% working interest.

CLIFTON RESOURCES LIMITED(CLF-V)

EXPLORATION TO START ON- Bruce E. Spencer, president of ADAMS PLATEAU PROPERTY Clifton Resources Limited, reports that a \$300,000 exploration program on the Adams Plateau joint venture near Kamloops, B.C. is scheduled to start on June 6, 1988. Clifton's interest in the joint venture is 44%, based on share of costs to date. The joint venture partners are ADAMS EXPLORATION LTD.(ADM-V) and IZONE INTERNATIONAL INC.(IZN-V). Diamond drilling, trenching, geochemical and geophysical surveys will explore a 4 km strike length which has stratigraphy similar to that which hosts the Rea Gold-Minnova Discovery and Samatosum deposits to the southwest. A 400 meter strike length was explored by trenching and drilling late in 1987 and scattered mineralization assayed as high as 2.75 oz.silver/t, 11.2% lead and 5.2% zinc.

ARAPAHOE MINING CORP.(ATH-V) has acquired an option to purchase the recently staked Alken claims on Vancouver Island, B.C. Samples show visible gold. BETHLEHEM RESOURCES CORPORATION is a 50% joint venture partner and operator. Exploration started 30May88 to include trenching and surface geology to confirm the discovery and extend the zone.

UNIVEX MINING CORPORATION(VNX-V) has started it's 1988 exploration program on the 100% owned J.P. Group located 22 miles from Terrace B.C. The program will consist of detailed surveying, geological mapping and sampling underground, and further surface trenching and mapping along the full length of the strike. An underground and surface drill program will follow.

BAY RESOURCES LTD.(BAJ-V) started a \$40,000 exploration program in May on the Malden Creek claims, Kamloops division, B.C. to locate and evaluate gold geochemical anomalies. The program will be completed in June 1988. Wolverton & Co. Ltd. recently sold 300,000 shares at 35¢ each.
