

TEUTON RESOURCES CORP. (TUO-V)

| SUB-ZONE | TRUE WIDTH | OZ. GOLD/T | D.Cromonese, P.Eng., |
|----------|------------|------------|-------------------------|
| K-1 | 6.9 feet | 0.630 | president has reported |
| K-1 | 12.3 | .238 | assays from trenches on |
| K-1 | 9.5 | .101 | the Konkin area of the |
| K-2 | 9.5 | .421 | Treaty Creek property, |
| K-2 | 9.5 | .172 | located 60 miles north |
| K-3 | 7.2 | .293 | of Stewart, B.C. In the |
| K-3 | 4.3 | .186 | area two parallel, gold |
| K-3 | 6.6 | .172 | bearing, skarn like |
| K-3 | 5.6 | .145 | bands, with widths |

----- ranging from 40 to 65 feet each, trend approximately east-west on Teuton Resources' property. To the west they are covered by overburden. They extend about 100 feet east where they are cut off by north trending faults. Within the skarn-like bands are discrete sub-zones characterized by higher sulphide concentrations and correspondingly higher gold values. Complete trenching results are indicated in the table. The table does not include trenches through the Gold Pit, which yielded high-grade assays in 1987.

Sampling has established that the sub-zones are bracketed by lower grade gold mineralization extending to the edge of the skarn-like bands. In the northernmost band the weighted average of two trenches traversing full band width came to 0.142 oz.gold/t over 41 feet. These results indicate an additional potential for a bulk mining project.

The company had been negotiating for diamond drill testing of these targets through an agreement with a major company. There was not sufficient time to conclude the agreement and do the drilling in the 1988 season so negotiations have been terminated.

Two trenches at the centre of the Goat Trail zone, 1000 feet north of the Konkin zone, returned values of 0.076 oz.gold/t over 14.8 feet and 0.258 oz.gold/t over 7.5 feet. Numerous rock and soil geochemical anomalies remain to be tested in this area.

Late in the season, a new zone was discovered about 2,400 feet south of the Konkin zone. Samples over 2,000 feet showed anomalous gold and arsenic. Geological and geochemical aspects indicate this to be the most outstanding exploration target yet developed on the Treaty Creek property. Drilling by Pennilane Development Corp. on the Knip property showed surface values did not persist to depth.

MOLLIE GIBSON MINES INC. (MLI-V)

TRENCH MINERALIZATION TO BE DRILLED-Taly Keren, president has reported Mollie Gibson Mines Inc. has let a drill contract and work has started testing under surface trenches which have yielded good grade gold and silver mineralization on the Paulson property near the town of Paulson, 40 km northeast of Grand Forks, B.C. Exploration in 1987 located four areas for detail work. Area No.1 includes former underground and surface workings where assays of recent grab samples return 3.1 oz.gold/ t and 1.17 oz. gold/t from the Purcell and Mollie Gibson workings. The portion of the completed Stage 1 exploration program resulted in the delineation of three corelated Ronka EM and magnetometer anomalies. One of these anomalies correlates with the Twin adit of the Mollie Gibson workings. In early September 1988 Mollie Gibson Mines sold 450,000 shares at 40¢ each from a prospectus through Wolverton Securities and West Coast Securities.

HARRISBURG-DAYTON RESOURCE CORP. (HRV-V)

SHELLEX GOLD CORP. (SCE-V)

ALL DRILL HOLES INTERSECT AT SUMMIT CAMP - Harrisburg-Dayton Resource Corp. and Schelllex Gold Corp. report the completion of a 4,200 ft. diamond drill program on their Summit Camp 50/50 joint venture located 30 km northeast of Hope, B.C. A total of 15 holes were drilled with all 15 holes intersecting the targeted Indiana structure Mineralized intersections from 3 to 36.5 feet in width were encountered and are presently being assayed. The drill program has proved that the mineralized structure extends to 350 feet below surface. Values from surface sampling indicate silver mineralization up to 230 oz.per ton. A 5.8 foot channel sample yielded 74.3 oz.silver/t, 38.1% lead, 3.1% zinc and 0.017 oz.gold/t. Based on the results to date the companies will increase development activity on the property with plans to include underground development.

PROGRESSIVE MINERALS LTD. (PVM-V) has negotiated the acquisition of 100% of the Logan group of mineral claims, a base metals project consisting of 54 units in the New Westminster mining division, B.C., for \$4,000 and 50,000 shares. Progressive also has a letter of intent with Walking Stick Oil and Gas to participate in 4 development oil wells in Saskatchewan.
