X-CAL RESOURCES LTD. (XCL-T)

TRENCHING OPENS - Trenching approximately 500 meters east
NEW EAST ZONE of the East zone on the 100% owned
Snowbird gold property of X-Cal
Resources, located near Ft. St.James, B.C., has located
a parallel gold bearing zone in granite. A 2,000 foot
gold anomaly in soils with values up to 5,000 and 6,500
ppb gold, conforming to the granite is being tested. A
grab sample of 0.25 oz.gold/t has been obtained from a
surface trench.

Trenching in the original East zone opened veining
similar to that of the Snowbird zone and returned a 1
meter width of 0.12 oz.gold/t. Trenching in the North
Zone opened some cross faulting.

Diamond drilling will be directed at increasing
reserves in the North zone and to investigate the
apparent plunge of the North zone.

Previous drilling returned values 230 ft. wide of
0.30 oz.gold/t and a North zone possible reserve of
250,000 tons of 0.20 oz.gold/t.

The North and Snowbird zones exist along strike from
each other in a structure which has been shown by drill-
ing to be over 4,000 ft long & open. Work will continue.
