-----'diamond drill-				
ing on the Soup property south of Johanson Lake, in the				
<u>Ominceca mining division, B.C.</u> Seven holes comprising				
1,112 feet were drilled to evaluate gold and copper				
mineralization in four identified zones. Holes No.1 to				
4 were completed successfully and confirm that the skarn				
zones carry significant gold concentrations and that				
copper may also be of economic significance. The No.7				
hole was lost before reaching the target vein.
