89-2*	48.0-101.2	53.2	175	0.79	0.008	R.S. Hewton, pres-
89-3*	65.9-139.9	74.0	243	.62	.009	'ident, Sulphurets

* bottomed in mineralization 'Gold Corporation

-----'reported drilling results from the 100% owned Kerr copper-gold property 40 km north of Stewart, B.C. WESTERN CANADIAN MINING CORPORATION (WCD-B) owns 74% of Sulphurets. The results confirm the presence of the copper-gold deposit with a strike length of 3,900 ft. Eight diamond drill holes have been completed with copper sulphides present over long intersections in all drill holes; hole 89-6 contains a 39 foot section with occurrences of native copper. Assay results are awaited. The drill has been moved 1150 feet to the north to test an anomaly on the adjacent Tedray property and to enable Sulphurets to complete their earn-in on a 50% interest. (SEE table of drill intersections on the Kerr in GCNL No.191, Oct.4(88).
