

NO.163(1989)
AUGUST 24, 1989

Yew

UNTESTED

WESTERN CANADIAN MINING CORPORATION (WCD-V)

SULPHURETS GOLD CORPORATION (SLE-V)

<u>HOLE</u>	<u>INTERVAL, M.</u>	<u>WIDTH</u>	<u>COPPER</u>	
89-4	3.1-239.9	777ft.	0.38%	'Sulphurets Gold Corpora-
incl. 118.0-239.9		400	.51	'tion has reported assays
incl. 217.0-239.9		75	.74	'from two new holes on
89.5	68.0-127.0	196	.90	'the 100% owned Kerr pro-

'Stewart, B.C. Hole 89-4
is vertical and drilled on the same section as holes 89-2
and 89-3 and confirms the down dip extent of the high
grade mineralization to the north. It has confirmed that
mineralization extends through an area assumed to contain
the Kerr deposit based on two holes lost in mineraliza-
tion during last year's program. See table above and
GCML No.158, for previous results and No.191.
