WESTERN CANADA

United Gunn has received interest from major mining companies regarding joint venturing the Tasco mineral property near Taseko Lakes, B.C. A diamond drilling program on this property in 1981 resulted in a 290-meter vertical hole yielding 0.28% copper and 0.023% molybdenum throughout its entire length. The Taseko Lakes area is currently receiving considerable attention by several exploration ventures for copper/gold. (SEE GCNL No. 203, OCT. 23/89, P.1 FOR RELATED DATA)
