TEESHIN RESOURCES LTD. (TEE-V)

NEW DRILL PROGRAM UNDERWAY - Teeshin Resources Ltd.  
president Stafford Kelley  
has reported a 9,000 foot drill program has started to  
test induced polarization anomalies in the area of the

present resources at the Dome Mountain gold project near  
Smithers, B.C. The program will test the easterly  
extension of the Boulder zone and two other anomalies at  
depths below the ore body. The program is expected to  
be completed in January, 1990.

Present reserves are 300,000 tons grading 0.355 oz  
gold/t and 2.34 oz.silver/ton. A 350 ton-per-day mill  
is planned for the project. The present program is aimed  
at increasing reserves. With expanded reserves, Teeshin  
expects the project will reach production during 1990.
