SWIFT MINERALS LTD. (SWS-V)

ESKAY CREEK DRILL - Swift Minerals Ltd. 50% and
HOLE ASSAYS AWAITED TONOPAH RESOURCES LTD. (TON-V)

50% have drilled the initial two
holes of the planned twelve-hole program on its 2300
acre Eskay Creek property 65 Km north of Stewart, B.C.

The cores are being sent for assay. Hole No. 1 cut
several zones of mineralization pyrite, and sparse galena
and sphalerite in siltstone and argillites in close
proximity to the Mount Dilworth formation. The first two
holes were located to follow up the geophysical anomalies
and the occurrences of free gold in old workings.
Drilling has been suspended until early February 1990.

The company has outlined extensive areas of
potentially economic mineralized zones using
geochemistry, ground and airborne geophysics. At least
five zones have been identified as drill targets for
1990. The company is planning to immediately start an
airborne geophysical survey on its Sulphurets property
adjoining the Kerr deposit recently acquired for
\$11,300,000 by Placer Dome which plans exploration.

Swift has called for bids on its proposed drill
program on its Hill porphyry copper and gold property 68
km north of Smithers near Hilltot Lake, B.C.
