

KILLICK GOLD COMPANY LTD. (KLK-V)

ADAMS PLATEAU EXPLORATION PLANNED FOR 1989 - Killick Gold Company Ltd. has given Camber Exploration Company Ltd. the exclusive right during 1989 to undertake or farm-out exploration programs on Killick's Adams Plateau claims some 70 miles northeast of Kamloops, B.C.

The 1989 field work on the claim holdings of Killick will be diamond drilling using equipment owned by Camber and its associated company, Aqua Bella Mineral Spring Company Ltd. Drilling will test mineral showings and either the downward or lateral extension indicated from ground geophysics or geological mapping.

Camber is a private exploration company incorporated in 1980 which qualifies for listing under the VSE's new rules. Camber and Aqua Bella have claim holdings on the Adams Plateau that will be explored during the 1989 field season. Camber has 1,448,200 issued shares of which 750,000 are in escrow agreement. Camber and Aqua Bella are controlled by a director of Killick.

Camber has under discussion the use of flow-through shares in a primary issue to raise funds for an expanded exploration program.

INTERNATIONAL COAST MINERALS CORPORATION (INK-V) has acquired a 100% interest in the Westerling, Westerling #2, Goldrim #1, Goldrim #2, WIM and WIM #2 mineral claims adjacent to their present holdings in the Kennedy River gold camp on Vancouver Island, B.C. These claims were formerly owned by Walter Guppy. No terms were disclosed. The company also reported the appointment of Jerzy Palka as vice president of exploration and development.

CATHEDRAL GOLD CORPORATION (CAT-T)

PORCHER ISLAND MINERALIZATION EXTENDED - Pierre B. Lebel, president stated that the key objective of Cathedral Gold Corporation's recently completed drilling program at its 100% owned Porcher Island property, 35 miles southwest of Prince Rupert, B.C. was to test continuity and strength of AT zone mineralization below 400 feet and expand AT zone ore reserves, which presently average 1,550 tons per vertical foot to a depth of 400 feet, or 620,000 tons. Assay results indicate that AT zone mineralization is persistent to a depth of at least 1,800 feet. ASSAYS TABULATED OVERLEAF.

To date, 91 holes have been drilled at Porcher Island and 4 mineralized zones identified. Ore reserves within the AT zone are estimated by the company at 623,000 tons grading 0.2 oz. gold/t, cut and diluted. These reserves are contained within a main quartz-pyrite vein striking northeast-southwest and within east-west striking offshoots.

The exploration program also included 3 holes drilled in the Slope zone (assays overleaf). Surface exploration was also carried out. One grab sample along the northeast extension of the AT zone assayed 12.63 oz. gold/t. Other grab samples of up to 0.328 oz. gold/t were collected 6500 feet southeast of the AT zone within the same intrusive body.

Cathedral has commissioned an independent project review that will be used in completing its 1989 program and budget for Porcher Island. (SEE GCNL No. 208, p. 1, Oct. 28/88 for previous assays and No. 177, 14 Sep 88 for a detailed review of the property).

DUTCH CREEK RESOURCES LTD. (DCK-V) has signed an option agreement with Silver Horse Mines Ltd. and Harco Management Ltd., private B.C. companies, to earn an undivided 50% interest in six crown granted claims in the Slocan mining division, B.C., by spending \$150,000 before 28Feb90, of which \$50,000 shall be spent before 28Feb89.

QPX MINERALS INC. (QPX-V)

**FRASER RIVER PLACER GOLD - QPX Minerals Inc. has acquired
PROSPECT TO BE EXPLORED an option to earn up to a 100%
interest in 35 placer leases**

**and 126 mineral claim units about 27 km north of Quesnel,
B.C.** The property covers a buried, gold-bearing channel
of the ancestral Fraser River that produced gold between
1907 and 1935, at which time the continuity of the
channel was lost. A 7 km extension of the buried channel
was identified using satellite imagery, seismic profiling
and drilling. Because the channel is formed of partially
cemented, free standing gravels containing free milling
gold, mining and milling costs are expected to be low.
QPX will carry out further seismic testing and drilling
before making a decision on underground development.

Under the option agreement, QPX will issue 75,000
shares to the vendor, First Fraser Minerals Limited
Partnership on signing and will commit to spend \$200,000
by 30Sept89 to earn a 30% interest. QPX may then elect
to increase its interest in stages to 51%, to 80% and to
100% through subsequent share issues and work commitments
over a period of three years to a maximum of \$1,400,000
and the issue of a total of 450,000 shares.

The transaction is subject to approval by share-
holders and regulatory agencies.
