ASSAYS FROM CHU CHUA REPORTED - J. Michael Kenyon, director of International Vestor Resources Ltd. reported that holes 31 through 51 were drilled to further define the limits and grade of the open pittable portion of the Chu Chua massive sulphide deposit 80 km north of Kamloops, B.C. The property is owned equally by the company, PACIFIC CASSIAR LIMITED (PFL-A-T) and QUINTERRA RESOURCES INC. (QUA-T,V). Minnova Inc. may earn a 50% interest through property exploration expenditures.

At the conclusion of last year's program, a drill indicated reserve was outlined containing 785,000 tons of 3.1% copper or 460,000 tons of 4.07% copper on an open pittable portion of a much larger, vertically dipping massive sulphide deposit. Drill data is being evaluated for new reserve calculations. Further metallurgical testing is underway. (SEE GCNL No.243, Dec.19, 1988, for more detail).
