

WINDFLOWER MINING LTD. (WFL-V)

CLAIM GROUP ACQUIRED - G.Ryznar, president, advises that Windflower Mining Ltd. recently acquired 100% equity in the White claim group from Newmont Exploration of Canada Ltd. for \$5,000 cash and 20,000 common shares. Newmont has retained a 2% net smelter return on any production from the property.

The White property, an epithermal gold prospect, consists of 80 claim units underlain by Tertiary felsic volcanics of the Ootsa Lake group of rocks. The property is located 90 km southwest of Vanderhoof in north central B.C. The claims cover a favorable geological setting at the junction of a number of strong regional lineaments and exhibits numerous areas where anomalous values in

mercury, arsenic, and antimony occur. These and other favorable geological features including brecciation and the presence of sulphide (pyrite) mineralization within the felsic rocks increases the possibility of locating gold deposits. Trenching and sampling by Newmont showed gold values as high as 795 parts per billion gold (almost 1 gram/tonne) and more recent sampling by Windflower indicates values as high as 960 ppb gold from selected samples. Although these values are not quite ore grade, they are encouraging and further work is warranted.

A geophysical crew (IP) is scheduled to be on the property July 20, 1989.
