NEW GOLD ZONE TO BE OPENED UNDERGROUND- Skylark Resources
and Viscount
Resources have reported high grade gold assays from the
Serp zone on the Skylark/O.B. Mine near Greenwood, B.C.
The Serp zone underlies the silver/gold mined H zone and
is relatively unexplored. All 21 underground percussion
drill holes returned good gold values with 2 returning 4
ft. assayed sections of high grade values: 3.3 oz.gold/t
and 2.4 oz.gold/t respectively. The holes are 25 ft.
apart and are in the same area where a test program of 3
diamond drill holes into the Serp zone in 1985 all
returned good gold values including Hole 13, which cut
13.5 ft. of 0.431 oz.gold/t. Serpentine outcroppings on
the Skylark/O.B. property north and south of the H zone
area indicate potential strike length of 7000 ft.
Exploration is continuing.
