

NORTHERN CROWN MINES LTD. (NCW-V)

TOFINO PROPERTY ACQUIRED - Northern Crown Mines Ltd. has acquired the Deer group of claims 27 km northeast of Tofino, B.C. The claims are underlain by units of the Karmutsen volcanics. Mineralization consisting mainly of chalcopyrite and pyrrhotite are associated with skarn zones at the contact of limestone and volcanics. This type of mineralization is similar to descriptions in Minister of Mines reports of copper deposits in the general area. Grab sample of a float at the base of a cliff showing extensive copper staining returned 0.024 oz. gold/ton, 0.50 oz. silver/t and 30% copper. Another sample returned 0.001 oz. gold/t, 1.35 oz. silver/t, 5.77% lead and 15.25% zinc.
