 FIRST ASSAYS REPORTED - Adolf A. Petancic, president of Pacific Houston Resources, Inc. reported the first assays from its current underground diamond drill program at the Silver Queen mine, 35 miles south of Houston, B.C. The intersection in 89-U-1 is 200 feet down dip (2,400 ft. elevation) from the 2,600 foot level and in section 28,800, between 88-S-57 (0.27 oz. gold/t, 11.84 oz. silver/t, 10.89% zinc over 8.2 ft.) and 88-S-58 (0.37 oz. gold/t, 17.4 oz. silver/t, 13.02% zinc over 12.5 feet).

The continuation of a precious metal shoot in excess of 1,000 ft. strike length, beginning in section 17,800 to at least 28,900, has been established by a number of diamond drill intersects and the 2,590 decline. The 2,590 decline intersected the vein in section 28,200 at elevation 2,425 ft. and assayed 0.29 oz. gold/t, 13.8 oz. silver/t and 11.5% zinc over a width of 7 feet. Drilling continues. (SEE GNCL No.106, 2Jun89 & No.91, 11MAY89).
