SURFACE SAMPLE ASSAYS - Christian von Hassert, president,
reports Antelope Resources Ltd.

has received assays results from a surface sampling program on the LeRoi property at Rossland, B.C. (SEE GCNL Nos. 165, 131, 130 & 80 FOR EARLIER RESULTS) Antelope, the operator, earned a 50% interest in the properties by spending \$500,000 on exploration. Bryndon Ventures owns the other 50%. The samples were taken from four separate mineralized trends with apparent widths up to five meters in the North Belt area. The above samples are part of 65 taken where more than 60% assayed greater than 0.1 oz.gold/t. Geophysical surveys are underway to better define the linear trends along which the samples were collected. The surveys have outlined numerous targets that will be diamond drilled in December.

The North Belt property is in the immediate vicinity of the LeRoi mine which produced 3,000,000 ounces of gold and 3,00,000 ounces of silver from 1891 to 1941. Last summer drill hole #89-87 intersected 7.1 oz.gold/ton over 8.4 feet.
