REYMONT GOLD MINES LTD. (RMT-Alberta)

DRILL PROGRAM TO START ON -Robert A. Dickson, president
PROJECT NEAR NELSON B.C. of Pacific Sentinel Gold Corp.
has reported diamond drill
crews have been mobilized to the Great Western Star bulk
tonnage gold copper project located near Nelson B.C.

The 10,000 foot program will test five bulk-tonnage
targets on the eleven square mile property. A recent
program of soil sampling, induced polarization
geophysics, geological mapping and trenching delineated
disseminated gold- copper and polymetallic targets. In
the western portion of the claims a mineralized gold
trend is coincident with a 7,500 foot long geophysical
and gold-copper soil anomaly. Initial drill
intersection assayed 0.13 oz gold t over 155 feet and
0.09 oz.gold ton over 120 feet.

Elsewhere on the property, geophysical and gold
copper soil anomalies are widespread and coincident with
a highly fractured and altered monzonite stock. Drill
intersections include: 0.023 oz gold/ton and 0.19%
copper over 260 feet and 0.023 oz/ton and 0.16% copper
over 240 feet. This target is similar to the Mt.
Milligan deposit of Continental Gold and BP Resources
Canada Limited.

Pacific Sentinel has an option to earn a 70%
interest in the property by completing \$3,000,000 in
exploration by 1994 and making property payments
totalling \$492,550 by 1996. Upon earn-in, further
expenditures will be shared by the joint venture
partners: 70% by Pacific Sentinel, 15% by Lectus
Developments Ltd. and 15% by Reymont Gold Mines Ltd.

The Phase I drill test should be completed by late
December 1989, with a Phase II program beginning in
early January 1990.
