LONGREACH RESOURCES LTD. (LRR-V)

SUMAC VENTURES INC. (SSV-V)

QUESNEL LAKE LEAD/ZINC PROJECT OPTIONED - Following the announcement
Nov.10,1989 by TSA EXPLORATIONS LTD. (TSA-V) 48% and TECK CORP. (TEK.A-V,T,M) 52%, of a significant lead-zinc discovery 90 km east of Quesnel, Longreach and Sumac acquired an option on adjoining property with lead zinc showings on surface. The discovery is near Malford Lake, just north of the north arm of Quesnel Lake, 30 km east of Keithley, 50 km east of Likely, B.C. (SEE GCNL NO.218, P.2., Nov.14,1989, for some details). Longreach 50% and Sumac 50% have acquired an option, subject to regulatory approval, on 35 claims adjoining the discovery claims to the south and east, for \$4,000 on signing, a 2% net smelter return royalty, and 300,000 shares of each company. The shares are to be issued in three installments over one year.

Longreach and Sumac have received assay results from a surface outcrop sample which returned 15,000 parts per million lead and 11,000 parts per million zinc plus 0.6 oz.silver/t, equivalent to approximately 2.5% combined lead zinc. Bulldozer trenching is planned for the property over the next few weeks as weather conditions permit.
