TERYL RESOURCES CORP. (TRC-V)

REG RESOURCES CORP. (RRE-V)

DRILLING PROGRAM TO BEGIN - John Robertson, president, reports Teryl Resources Corp. (22.5%) and Reg Resources Corp. (52.5%) will begin a drill program immediately on the Silverknife claims in the Midway area of north-central B.C. just below the Yukon border. Chevron Resources Corp. owns 25%. The drill hole will test a large geophysical anomaly about 600 meters long and 150 meters wide. According to geophysical consultants, the anomaly could be caused by a horizontal tabular body contained within a region of moderately high resistivities and disseminated sulphide mineralization.

Previous drilling consisted of 13,700 feet of drilling in 49 holes resulting in drill-indicated and inferred reserves totalling 400,000 tons of silver, lead and zinc ore with an estimated in-situ value of \$100 per ton. The best assays were 29.0 oz. silver/ton and 17% lead/zinc combined over a 14-foot section.
