and	28 - 34	6	19.5	.08	N/A	
89-12	4 - 10	6	19.5	.20	N/A	

Note: Higher grade copper intervals contain up to 1.0 oz/tonne of silver. * Not available yet.

INITIAL RESULTS ON - J. Donald Graham, P.Eng., president, PHASE II DRILLING reports Taywin Resources has completed Phase II diamond drilling program on the Merry Widow gold-copper skarn property near Port McNeill, Vancouver Island, B.C. Hole 89-9 was drilled at the same collar and direction as hole 89-7, but 10 degrees steeper than 89-7. Hole 89-17 was drilled at a dip of -50 degrees from the hole 89-7 site, but at a direction 20 degrees to the west of 89-7. Hole 89-7 encountered 14 meters (46 ft.) grading 0.39 oz. gold/ ton and 0.21% copper.

Holes 89-18, 19, 20 and 21 were drilled near the bottom of the pit to test copper sulphides reported in old records. These four holes were fanned to the west from two sites 18 meters (60 ft.) apart. The intersections represent an extension of gold values found in the Phase I drilling. Mining would be low cost as the mineralization lies in the hanging wall of an existing stope.

Other current work included the rehabilitation of the raise from the Kingfisher adit to the bottom of the pit. The raise and three sublevels branching from it are in the exploration area and are being mapped, sampled and considered as sites for underground drilling.

Drilling continues on the north wall of the Merry Widow pit and in the Raven deposit, 150 meters to the north. Taywin acquired the Merry Widow property for payment of a 12.5% net profits royalty. (SEE GCNL No. 138, 19Jul89, P.1 FOR PHASE I DRILLING RESULTS)
