TAYWIN RESOURCES LTD. (TYN-V)

MERRY WIDOW ASSAYS - J.Donald Graham,, P.Eng., president of Taywin has reported more assays from diamond drilling on the 100%-owned, 57 Crown granted Merry Widow gold/copper skarn property near Port McNeill, Vancouver Island, B.C. (SEE TABLE & MAP OVERLEAF P.1)

The table includes updates on copper values not available earlier.(SEE GCNL No. 189, OCT.2/89, P.2 FOR EARLIER DRILL RESULTS)

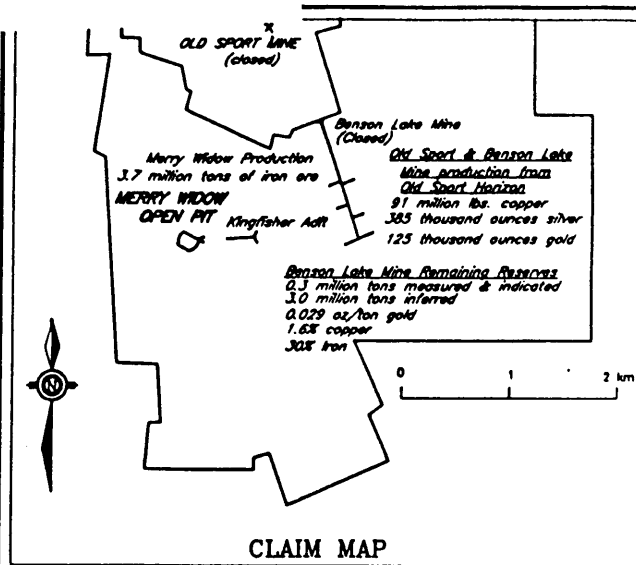

The drilling is testing skarn formations. Holes 27 and 28 were prospect holes drilled in the Raven Pit area and encountered strong magnetite and disseminated sulphides. Hole 30, see table, also drilled in the Raven area 200 meters north of the Merry Widow pit, indicates the ore-forming potential of the structure.

Preliminary metallurgical tests indicate gold values can be extracted in a gravity and flotation sulphide concentrate with recoveries of about 75% - 80%. Cyanide is not required.

For the fall and winter, Taywin is considering underground drilling from the recently rehabilitated raise and sublevels. The company is currently discussing a joint venture with a major mining firm.
