WESTERN

QUESNEL CANYON PROJECT:

The 1989 objective was to establish a 100 cu.yd. per hour placer gravel washing operation at the property located 9 km east of Quesnel and consisting of 7 leases on the north side of Quesnel River. The work in Alaska has deferred this program. The intent is still to define 7,000 oz. placer gold in place. Work on 94 pits in 1987 indicated probable reserves of 81,000 cu.yds. grading 0.012 oz.gold/cu.yd. plus possible yardage. Further work is to be planned.
