WECTED

TRIUMPH RESOURCES LTD. (TUM-V)

ASSAYS AWAITED - John S. Brock, president, Triumph Resources Ltd., reports that diamond drilling at the Mt. Alcock property 240 km. NW of MacKenzie, B.C. has confirmed extensions to depth of zinc and lead sulphides in shale-hosted barite. The mineralized horizon ranges in thickness from 7.3 to 20 meters and has been traced for 150 meters down dip. Five holes have been completed to date and drilling is continuing. Drill core from the first three holes is now being shipped for assay. Results will be released.

An expanded exploration program is planned with preparations being made for an induced polarization survey and additional drilling. (SEE GCNL No.185, 26Sep89 FOR MORE DETAILS & MAP)
