SPRINGER RESOURCES LTD. (SPR-V)  
COVE RESOURCES CORPORATION (COV-V)

ESKAY CREEK ASSAYS AWAITED - Mineralization intersected  
are in for assay from the  
first two diamond drill holes at the Eskay Creek  
project, 60 miles north of Stewart, B.C., of Springer  
Resources 37.5% and Cove Resources 12.5%. GRANGES  
INC. project operator, holds on option to earn a 50%  
property interest. The third hole in a series along 300  
meters of strike length on the AP zone also encountered  
the mineralized structure with core now being split and  
logged. Hole number four is drilling.

The zone which has been intersected in the holes,  
all drilled at a minus 45 degree angle, appears to extend  
from 25 meters in width and visually contains sections of  
pyrite, zinc, copper, galena, graphite.

One 3.5 meter trench located near hole AP number one  
returned assays up to 56.59 grams gold/tonne. Further  
grab samples on the Coul claims located along the  
projected strike of the Calpine discovery have returned  
elevated gold, silver and arsenic values with gold  
ranging to 5.8 grams/tonne. Targets on the Coul block  
are to be drilled following the AP zone drill program.
