UNDERGROUND PROGRAM PLANNED - Dr. G.G. Carlson, president of Inell Resources has reported assay results from the second phase of drilling on the AK zone on the property in the Iskut River area, 100 km north of Stewart, B.C. Previous results had shown 9.8 feet assaying 1.21 oz. gold/t in surface trenching, 80 ft. of 1.21 oz. gold/t in the initial drill hole and 91.99 oz. gold/t over 1.5 feet in the adjacent, newly named Ninety-eight zone.

This mineralized intrusive breccia, on the footwall of syenite porphyry dike, forms a sheet-like body with the potential to develop into an ore shoot with significant tonnage potential. The zone is within 600 feet horizontally of the existing underground workings. Plans are underway to examine the zone from underground.
