NO.196(1989)
OCTOBER 12, 1989

SULPHURETS GOLD CORPORATION (SLE-V)

PLACER DOME INC. (PDG-V,T,M)

WESTERN CANADIAN MINING CORPORATION (WCD-V)

NEW DRILLING EXTENDS - Sulphurets Gold Corporation has
COPPER, - GOLD ZONE issued 714,285 shares at 70¢ each
to CMP 1989 Resource Partnership
Limited for \$500,000 of flow through funds used for the
1989 exploration program on the 100% owned Kerr property,
20 miles north of Stewart, B.C. All field work has now
been completed. The table on the MAP OVERLEAF shows
results for all drilling in the Kerr copper-gold deposit.

Diamond drilling has now tested the deposit for a
length of 5250 feet. The width of the deposit has not
been fully determined as most drill section have one
drill hole only but, where tested down dip, the width
would appear to be at least 600 to 800 feet. The average
thickness of all drill intersections grading over 0.5%
copper is 294 feet. Many holes ended in mineralization.

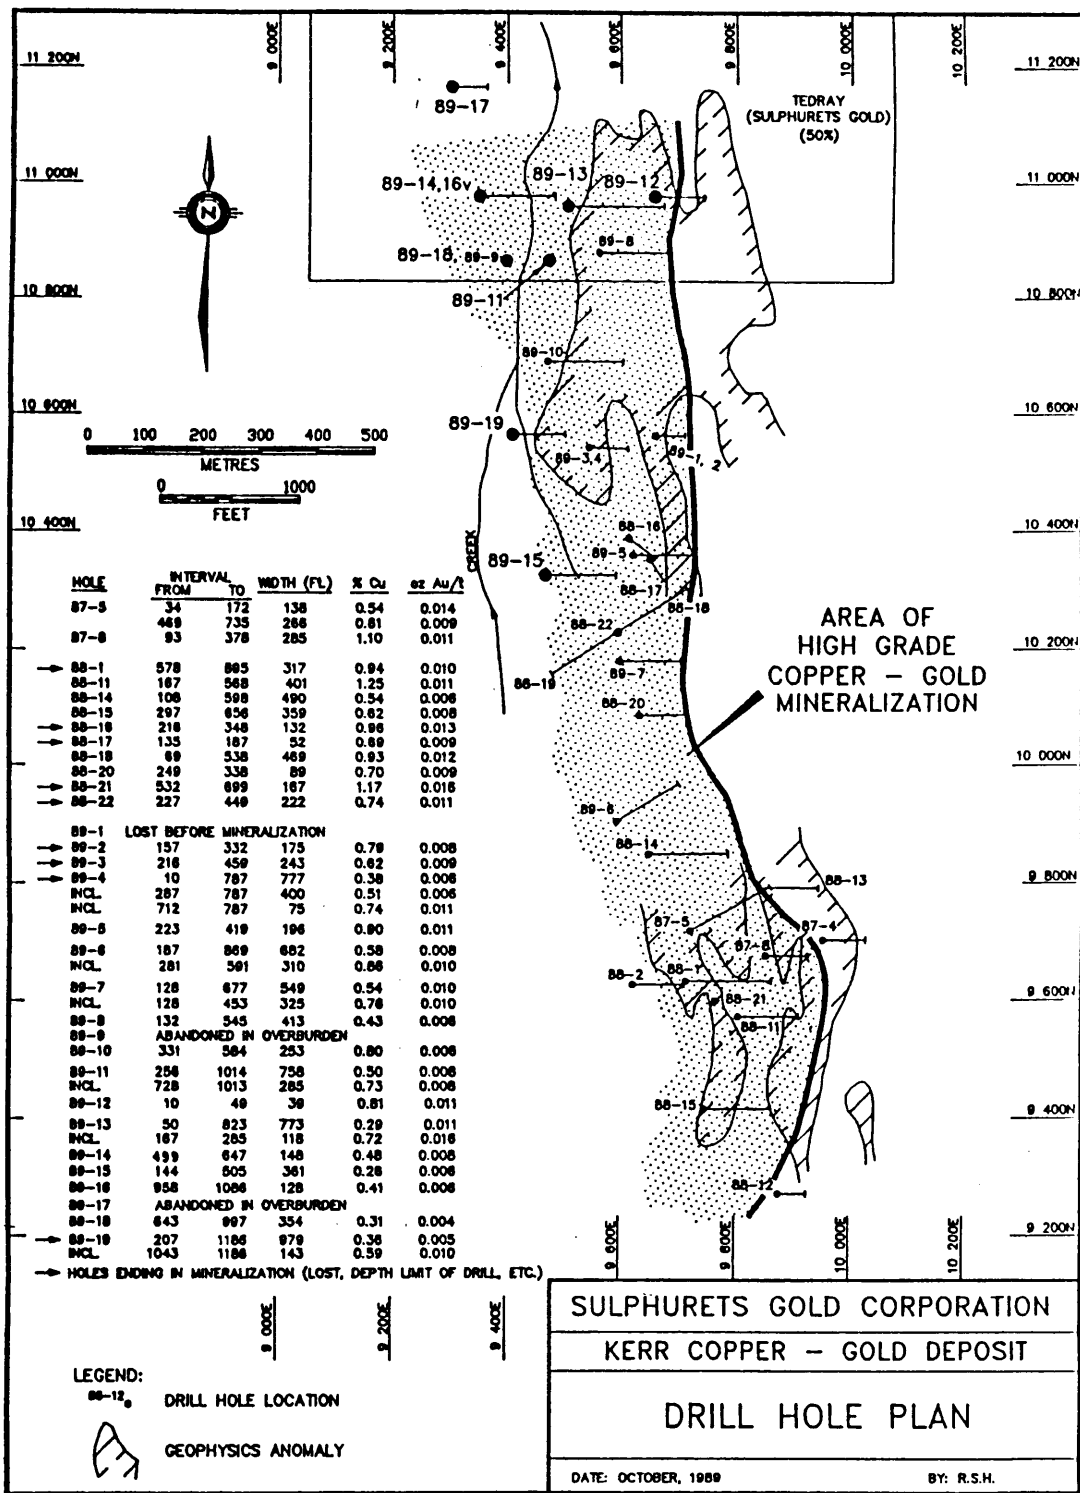

The potential for additional mineralization exists
along strike and down dip.

Drilling prior to 1989 indicated 66,000,000 tons
grading 0.86% copper, 0.01 oz.gold/ton.

Placer Dome Inc. on Oct.10/89 mailed an offer to
purchase, for 95¢ each, all of the common shares of
Sulphurets Gold. Western Canadian Mining has agreed to
sell the 7,645,512 shares, or 69% of the fully diluted
shares of Sulphurets Gold to Placer Dome. (SEE GCNL
NO.174, 11Sept89, for much detail).
