AVONDALE RESOURCES INC. (AVD-V)					
HOLE NO.	INTERVAL METERS	LENGTH METERS	GOLD OZ/T	SILVER OZ/TON	COPPER %
AVD90-11	16.0 - 21.0	5.0	0.032	0.09	0.05
AVD90-13	17.0 - 33.0	16.0	.131	.23	.64
Incl.	19.0 - 25.0	6.0	.102	.42	1.44
	27.0 - 28.0	1.0	1.07	.32	.12
And	37.0 - 46.1	9.1	.038	.14	.07

DRILL RESULTS - Murray Pezim, chairman, reports Avondale Resources Inc. has received drill results from its Forrest Kerr project located about 65 miles northwest of Stewart, B.C. AVD90-11, 13 and 14 were all drilled on the western strike extension of the Creek showing, a broad zone of gold/silver/copper mineralization first drilled in July. Assays for AVD90-12, also on the Creek showing, and AVD90-15, on the Canyon Shear, are pending. Hole AVD90-13 intersected the Creek showing about 130 feet west of AVD90-10, which returned 85.3 feet averaging 0.072 oz.gold/ton, 0.23 oz.silver/ton and 0.46% copper. AVD90-14 was drilled to intersect the zone beneath AVD90-13, did not return significant results.

Avondale plans to start a second phase of drilling directed at three high priority zones of mineralization, and on at least two discoveries made in 1990. One of these discoveries, the Goldpan showing, returned a soil sample which assayed 11.72 oz.gold/ton; additional prospecting is underway to be followed by backhoe-assisted trenching to find the bedrock source of this sample.

Specifically, Phase II drilling will concentrate on the higher grade gold and copper showings at higher elevations on the property, including the 50 Zone, Alpine zone, Tarn zone, Goldpan showing and the Forrest zone. (SEE GCNL No.152, BAUG90, P.3 FOR PREVIOUS RESULTS)
