28119	2.6	.064	34.2	4.18	17.80	.33

MASSIVE SULPHIDE ZONE DISCOVERED -Murray Pezim, chairman, reports Eurus Resource Corp. and 50/50 joint venture partner Thios Resources Inc. have discovered a zone of massive sulphide mineralization with precious metal values on their Rock and Roll project located six miles northwest of the Snip deposit in the Iskut River area northwest of Stewart, B.C. Eurus and Thios can earn a 100% interest from Prime Capital Corp.

The companies are currently completing a Phase I exploration program comprising linecutting, prospecting, geophysical surveys, reconnaissance and detailed mapping, geochemical sampling and trenching. Anomalous gold results in rock and soil sampling led to the discovery of the Black Dog zone, a 2.5 to 3.0-meter wide sub-vertical shear featuring pyrite, galena, sphalerite and chalcopyrite mineralization. Hand trenching exposed about 15 meters of strike length on the zone, which is still open along strike and to depth. SEE TABLE ABOVE FOR ASSAY RESULTS.

Eurus and Thios have completed about \$125,000 on the project to date. The companies are continuing to trench the Black Dog zone along strike. It is expected this work will be followed by diamond drilling. (SEE GCNL No.94, 15May90, P.1 FOR OTHER INFORMATION)
