TICKER TAPE RESOURCES LTD. (TKT-V)

NEWICE PROJECT UNDERWAY - Murray Pezim, director, reports Tymar Resources Inc. and joint venture partner Ticker Tape Resources Ltd. have mobilized a drill to their 100%-owned Newice project located 68 miles northwest of Stewart, B.C. The property lies 10 miles north of the Prime/Cominco SNIP deposit.

Previous work in 1987/88 led to the discovery of lead/zinc/silver skarns and a number of gold-bearing quartz veins. A total of 1,483 feet was drilled on the King vein in four holes that returned up to 1.004 oz.gold/ton over 5.0 feet.

Work in 1989 by Tymar/Ticker Tape included contour soil sampling, prospecting and grid soil sampling which identified more quartz veins called the Mist showing, near the King vein. These veins, between five and 15 cm. wide, are hosted within the same intrusive hosting the King vein with grab samples assaying up to 5.473 oz.gold/ton.

This year's drilling will test the new high grade quartz veins with four holes totalling 984 feet over 800 feet of strike length.
