WESTERN CANADIA

SARABAT GOLD CORP. (SAB-V)

GOLD TORCH RESOURCES LTD. (GTJ-V)

NEW GOLD DISCOVERY - Gary Powell, director, reports Sarabat Gold Corp. and Gold Torch Resources Ltd. have discovered a new mineralized zone on the ICY property located adjacent to the Bellex J.W. property in the Galore Creek camp some 150 miles northwest of Stewart, B.C. SEE MAP OVERLEAF PAGE 1. Gold Torch can earn a 50% interest by spending \$3,500,000 on exploration, issuing 200,000 shares and buying at least \$500,000 in Sarabat shares. Significant assay results from chip samples from the new structure, called the Trident vein, are listed in table below:

<u>GOLD</u>	<u>WIDTH</u>	
<u>QZ/T</u>	<u>FEET</u>	'
1.77	4.6	'
0.47	3.9	'
2.553	1.6	'
0.976	2.6	'

The Trident vein has been traced at surface for a minimum strike length of 650 feet. Further trenching and sampling of this structure and adjacent wallrock is currently underway. Several other target areas on the ICY property are currently being evaluated by geological mapping, surface trenching/sampling and geophysical surveying.

Previous sampling returned the following results:

<u>SHOWING</u>	<u>WIDTH</u>	<u>GOLD</u>	
<u>NAME</u>	<u>FEET</u>	<u>QZ/T</u>	'
<u>Boundary Zone</u>	11.2	0.329	'
<u>Fourteen Vein</u>	4.9	.39	'
<u>Tuff Zone</u>	16.4	.248	'
