BELLEX MINING CORP. (BEL-V)

MINERALIZATION DISCOVERED - Heather Schellenberg,
president, reports Bellex
Mining Corp. has discovered a mineralized volcanogenic
horizon on the Schez Oksa property in the Galore Creek
camp about 150 miles northwest of Stewart, B.C. SEE MAP
OVERLEAF PAGE 1. APEX ENERGY CORP. (APG-V) can earn a
50% interest by paying \$65,000, issuing 200,000 shares
and spending \$500,000 on exploration over four years.
Samples from the 25-meter wide horizon show distinctive
banded sulphide mineralization comprising fine grained
chalcopyrite, pyrite and sphalerite; assays are pending.

Based on this discovery, Bellex has acquired the
adjoining Cone 1,2 and 3 claims comprising 37 units from
the Cascade Investments Joint Venture for 50,000 shares
and a 2% net smelter return royalty in favour of the
Joint Venture.

At the J.W. property, also in the Galore Creek
area, where QUATTRO RESOURCES LTD. (ORO-V) can earn a
50% interest by spending \$400,000 on exploration by
30Sep90 and an additional \$350,000 by 31Dec90, the
following visual observations have been made. Drill
No.1 is a 45 ° hole collared at the origin of the
property grid at an azimuth of 080 degrees. The hole
was drilled across the mineralized structure. From 265
to 730 feet, there was chlorite epidote altered sheared
microdiorite with up to 5% disseminated pyrite and minor
chalcopyrite. From 730 to 775 feet there was quartz
breccia with chalcopyrite, pyrite and pyrrhotite with
minor chlorite epidote veinlets. Total sulphide content
is estimated at 25% with 2% visible chalcopyrite.
Assays are expected within two weeks. (SEE GCNL No.147,
31Jul90, P.3 FOR PREVIOUS DATA)
