ADRIAN RESOURCES LTD. (ADL-V)

SKI PROJECT DRILL RESULTS - William Campbell, secretary,  
Adrian Resources Ltd., reports  
assay results from the Ski property adjacent to the  
Eskay Creek project of Prime/Stikine, about 60 miles NW  
of Stewart, B.C. PRIME RESOURCES GROUP INC. and  
STIKINE RESOURCES LTD. have an option to jointly earn  
a 50% interest in the Ski Project.

The table below summarizes results from six holes  
on the Pumphouse Lake Zone and the easternmost part of  
the 21B Deposit in the TOK Claim Gap of the Ski property.

HOLE	SECTION	INTERVAL	LENGTH	GOLD	SILVER
NO.	METRIC	FEET	FEET	OZ/T	OZ/TON
CA90-677	5+00N	183.7 - 187.0	3.3	0.368	35.60
		321.4 - 328.0	6.6	0.290	6.74
		344.4 - 364.1	19.7	0.192	3.96
		406.7 - 511.7	105.0	0.392	40.45
Including		416.6 - 433.0	16.4	1.029	143.36
		528.1 - 541.2	13.1	0.205	1.42
		610.1 - 626.5	16.4	0.243	1.05
		711.8 - 721.6	9.8	0.139	0.59
CA90-678	4+60N	108.3 - 118.1	9.8	0.110	0.41
		131.2 - 141.0	9.8	0.120	0.44
		223.0 - 242.7	19.7	0.451	7.62
		252.5 - 321.4	68.9	0.335	5.51
Including		298.5 - 311.6	13.1	0.795	1.92
		367.4 - 380.5	13.1	0.221	1.65
CA90-679	5+00N	160.7 - 170.5	9.8	0.476	8.92
CA90-680	5+00N	141.1 - 154.2	13.1	0.979	30.05
CA90-681	4+75N	147.6 - 160.7	13.1	0.158	13.92
CA90-682	4+75N	143.0 - 150.9	7.9	0.175	25.95

p. 1 of 2

Mineralization in these holes adds substantially to the continuity of the Pumphouse Zone and will increase reserves in the Adrian TOK Claim Gap. Results are pending for drill holes CA90-686, 687, 690 and 691 also completed on the TOK Claim Gap portion of the project.

Adrian also reports drilling results from the Main Portion of the Ski property. Drill holes AD90-21 completed on Section 19+80N and AD90-22 drilled on Section 15+50N returned no significant results. Hole AD90-25A, drilled on Section 14+50N returned a zone of anomalous gold values between 1,840.1 and 1,863.1 feet which averages 0.057 oz.silver/ton over 23.0 feet.

The deepest drill hole completed to date, AD90-30 drilled on Section 19+80N, intersected similar stratigraphy to that which hosts the 21 Zone deposits. At a depth between 3,895 and 3,960 feet the Contact Argillite and Transition zone were intersected, while footwall rhyolite occurs from 3,960 to 4,060 feet and the remainder of the hole to 4,144 feet consisted of footwall dacite. Results from hole AD90-30 are pending.

Two drills are completing in-fill holes between Sections 13+00N and 14+00N on the Main Portion of the Ski property. This area has returned numerous economic intersections, including 0.219 oz.gold/ton gold with 151.83 oz.silver/ton over 13.1 feet in hole AD90-04 and 0.165 oz.gold/ton with 3.67 oz.silver/ton over 62.3 feet in hole AD90-09. These holes represent the northern extension of the Eskay Creek 21B deposit. The in-fill drilling program in this area on the Ski property will allow a drill indicated reserve estimation to be prepared for this portion of the Adrian property. (SEE GCNL No.235, 5Dec90, P.1 FOR OTHER ADRIAN PROJECT DATA)

Adrian Resources will not proceed with the purchase of 400,000 shares of TRIMIN RESOURCES INC. following a proposed bid by EURUS RESOURCE CORP. (ERR-V) for up to 2,000,000 Trimin shares. As the Adrian and Eurus boards contain three common directors, Adrian's share purchase would not be allowed under securities regulations. Eurus proposed to buy Trimin shares for \$1 in cash plus one Eurus share, which traded at \$1.40 per share on Dec.4,1990, for every Trimin share. Trimin's directors are currently reviewing the offer as well as a proposed issuer bid by Trimin for up to 2,200,000 shares a not

less than 95% of net asset value. (SEE GCNL No.234, 4Dec90, P.2 FOR PREVIOUS INFORMATION)
