Kokanee Explorations Ltd. and Barkhor Resources have reported results from the first two drill holes on the STAR property located 35 miles south of Kimberly, B.C. Barkhor Resources Inc. is earning a 50% interest by funding the initial \$600,000 of exploration on the property. (SEE PROPERTY LOCATION MAP GCNL NO.121, P.3)

<u>HOLE NO.</u>	<u>LOCATION</u>	<u>DEPARTURE</u>	<u>AZIMUTH</u>	<u>DIP</u>	<u>TOTAL DEPTH</u>
S90-1	2140N	2985E	240 deg.	-45	1380.0 Ft.
S90-2	2140N	2985E	209 deg.	-45	1414.0

Drill hole S90-1 intersected disseminated and veined mineralization from 300 feet to over 1300 feet which is anomalous for the Middle Aldridge rocks. Included in this zone were vein zones, probably representing feeder veins to the system that deposited the bedded zone in Hole S90-2.

Hole S90-2 intersected anomalous disseminated and vein mineralization from 380 feet to 1280 feet and bedding parallel vein and bedded sulphide zones from 1145 feet to 1165.4 feet. This latter zone represents a major zone, which has been identified as stratiform from intersections in Hole S90-3 (assays pending). Its extent down dip is currently being tested by drill hole S90-6.
