BRADNER RESOURCES LTD (BRD-V)

CRANBROOK B.C. PROPERTY - Michael Levinson, chairman has  
TO BE EXPLORED reported Bradner Resources has  
started exploration work on  
the Sun property, 3 km southwest of the Barkhor  
Resources/ Kokanee Star property, 40 km. south of the  
Sullivan Mine, SE B.C. (See location map overleaf P.3  
GCNL No.121, 22June90).

A strong lead zinc geochemical soil anomaly, 1900  
metres long and up to 600 metres wide was identified on  
the Sun property by th previous operator - Cominco,  
Ltd. This anomaly has never been tested by drilling.

The main showing area on the Sun property contains  
two old adits which host geological indicators of  
Sullivan type massive lead-zinc-silver mineralization  
including sedimentary breccias and quartz-sulfide veins.

A grab sample from one of seven veins outcropping  
on the Sun property recently returned assay values of  
56.56% lead and 18.65 oz./ton silver.

The current program will include geological and  
geophysical work prior to diamond drilling.
