NO.140(1990)  
JULY 20, 1990

WESTERN CANADIA

## INTERNATIONAL SHASTA RESOURCES LTD. (ISR-V)

POSITIVE ECONOMIC RESULTS - Melvyn M. Rahal, president,  
FROM THE TOODOGGONE MINE announced International  
Shasta Resources Ltd. has  
processed in excess of 45,000 tons of ore since mill  
startup in October, 1989. The ore was derived from both  
open pit and underground on the Shasta mineral claims in  
the Toodoggone area of B.C. The mill is now operating  
at over 200 tons per day on a continuous basis with  
excellent recoveries of both gold and silver.

By agreement with Homestake Mining (Canada)  
Limited, International Shasta has a further 70,000 tons  
of ore to mine. This tonnage will provide mill feed for  
the next year at 6,000 tons per month.

Homestake Mining has begun its 1990 exploration  
program of \$500,000 consisting mainly of diamond  
drilling. Results can be expected by the end of  
August. Homestake has supplied its report on the 1989  
programed which establishes the insitu geological  
reserves of 1,389,000 tons at 5.07 grams per ton gold

equivalent based on 2.0 grams per ton gold equivalent  
cutoff grade for three main zones.

The ore processed to date is of considerably higher  
grade with 0.125 oz./ton gold and 8.0 oz./ton silver  
being representative.

Both mining and milling are proceeding well and are  
providing positive economic results. (See GCNL No.88  
and No.20 for previous data).
