KOKANEE EXPLORATIONS LTD. (K00-V)

BARKHOR RESOURCES INC. (BHO-V)

DRILLING UPDATE - Laurence Stephenson, president, Kokanee Explorations, reports hole S-90-1 on the Star property 50 km southwest of Cranbrook, B.C. was completed to a depth of 1,450 feet. Hole S-90-2 is being collared at the same site to determine the strike and thickness of the veins and to test the thickness of bedded and disseminated zones.

Hole S-90-1 intersected over 1,000 feet (400 - 1,400 ft) of Aldridge stratigraphy which hosted two thick veins of lead and zinc sulphide and many veinlets and disseminated lead and zinc sulphides. As well, bedded tourmaline with disseminated lead and zinc sulphides were encountered. The drill core exhibited features similar to the Sullivan deposit. The indicated improvement in grade suggests a deeper test will be necessary requiring a larger drill rig, which is available. Barkhor Resources holds an option to earn a 50% interest in the property. (SEE GCNL No.105, 31May90, P.3 FOR PREVIOUS INFORMATION).
