KOOKABURRA GOLD CORP. (KOB-V)

HIDDEN VALLEY WORK TO BEGIN - John Nebocat, director
has reported Kookaburra
Gold Corp. plans to resume work 3Jul90 on the Hidden
Valley property situated 25 miles west of Smithers,
B.C. (See property location map overleaf)

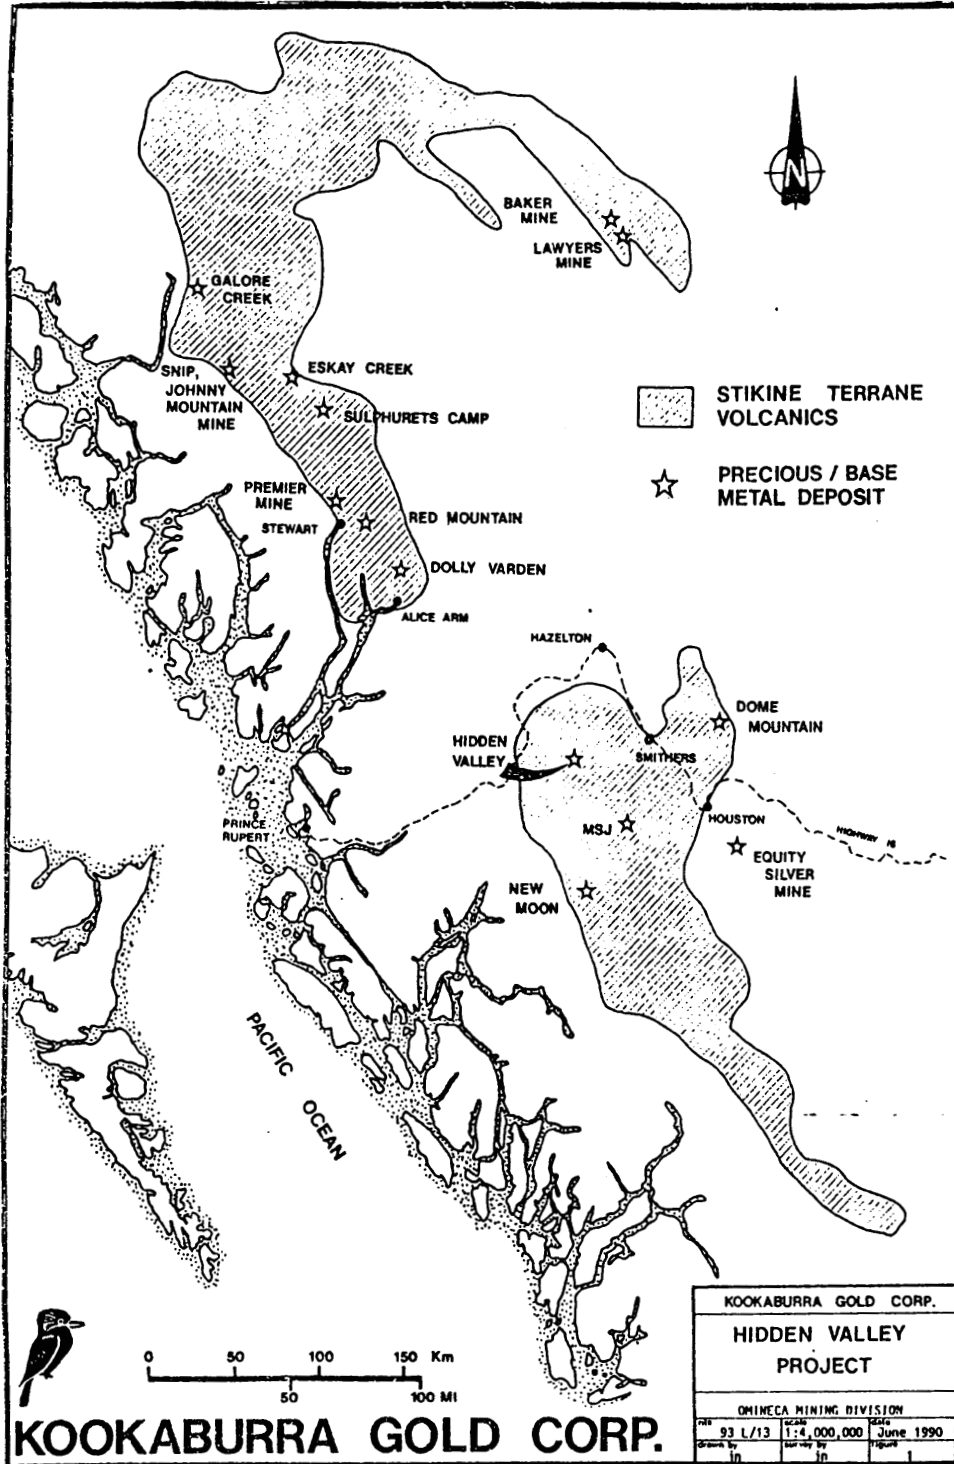

Last season's mapping, sampling and prospecting
program has shown epithermal style precious and base
metal veins traversing the property along steep
structures. The veins host arsenopyrite, galena,
chalcopyrite, tetrahedrite and locally massive pyrite in
a quartz-carbonate-barite gangue. Select samples run up
to 0.38 oz./ton gold and 10 oz/ton silver.

The property was previously explored for porphyry
type copper and molybdenum mineralization which occurs
in an elongated intrusion at the center of the claims.
Mid to Upper Jurassic volcanics surround the porphyry
which occurs at the boundary between Bowser Basin
sediments to the north and Hazelton Group volcanics to
the south.

A trenching, sampling, prospecting and electro-
magnetic survey program is planned to define drill
targets. (SEE GCNL No.112, 11Jun90, P.2 FOR OTHER
PROJECT INFORMATION)
