TEESHIN RESOURCES LTD. (TEE-V)

DOME MOUNTAIN REPORT - Stafford Kelley, president,

Teeshin Resources Ltd., reports a number of senior mining companies and investment groups are examining the Dome Mountain property data with a view to providing the necessary capital to bring the property to production. The company is discussing terms with some of the interested parties and expects a satisfactory agreement will be reached before the end of July. Teeshin recently secured a 100% interest in the Dome Mountain project located near Smithers, B.C.

A program is planned to add 300,000 tons to the reserves by drilling off a portion of the easterly extension of the Boulder zone. Reserves presently stand at 324,000 tons grading 0.355 oz.gold/ton and 2.34 oz.silver/ton with a potential of up to 1,000,000 tons in the zone. Structural controls within the shear structure hosting the ore body indicate the possibility that similar ore zones may repeat at depth. Two parallel structures have equal potential to the Boulder zone. The Dome Mountain property is located on the Skeena Arch, a geological structure known to host major ore bodies. (SEE GCHL No.59, 23Mar90, P.1 FOR MORE DATA)

Due to other commitments, Koos Schippers and Malcom Slack resigned as directors. Michael Coulter will rejoin the board as secretary. Stafford Kelley, president, will assume the chairman's position. Michael Ross, Mel de Quadros, Marilyn Bloovoil remain directors.
