WESTERN CANADIA

LECTUS DEVELOPMENTS LTD., LDV-V)

GREAT WESTERN STAR - Stanley R.Ford, P.Eng., President,
DRILLING RESULTS reports Lectus Developments has
received assay results from the
Great Western Star bulk tonnage gold/copper property
near Nelson, B.C. Lectus can earn a 50% interest in the
11 square mile property and REYMONT GOLD MINES LTD.
(RMT-ALBERTA) can acquire the remaining 50%. PACIFIC
SENTINEL GOLD CORP. (PSG-V) has an option to earn a 70%
interest in the Lectus and Reymont agreements.

Two diamond drills have completed 18 holes
totalling 15,500 feet that have intersected gold and
copper mineralization over a 16,000-foot long
mineralized trend extending from the Tough Nut target in
the SW to the Ron target in the NW. Assay results
include a 147.6-foot intersection grading 0.065
oz.gold/ton in the Alma N target, 164 feet grading 0.032
oz.gold/ton and 0.27% copper in the Star/Eureka porphyry
target, 11.5 feet grading 0.016 oz.gold/ton, 0.13% and
1.5% zinc in the semi-massive sulphide Tough Nut target
and a 14.3-foot intersection grading 0.011 oz.gold/ton
and 1.25% copper in the Ron Target. Further assays from
the Phase I drill program will be released as available.
