KOKANEE EXPLORATIONS LTD. (K00-V)

FIRST CASH PROPERTY RESULTS REPORTED- L.Stephenson,P.Eng.
president of
Kokanee Explorations Ltd., reports the initial results
of the exploration program on its 100% owned Cash
property, 25 km northeast of Cranbrook, B.C.

Exploration is ongoing on the 1300 metre long
I.P. zone which has been associated from drilling
results with significant concentrations of copper and
zinc is distinctly different zones. The copper zone
(C-90-3) is associated with massive sulphides and a
disseminated porphyry type mineralization, both
associated with the adjacent syenite intrusive. The
zinc zone is associated with altered carbonate rocks.

The hole C-90-1 was not drilled far enough to
intersect the zone and assays are pending on the other 6
holes. (SEE ASSAY RESULTS AND MAP OVERLEAF.)

LOCATIONS:

<u>HOLE</u>	<u>SECTION</u>	<u>DEPARTURE</u>	<u>BEARING</u>	<u>DIP</u>	<u>TOTAL DEPTH</u>
C-90-1	5810N	4204E	090d	-60d	978 Ft.
C-90-2	5898N	4300E	-	-90d	716
C-90-3	5745N	4313E	-	-90d	555

Later holes also have intersected both zones along
strike and are currently being analyzed. All inter-
sections are close to surface and reveal a system that
has significant economic concentrations of base and
precious metals.

Kokanee is currently outlining its drill targets to
continue the evaluation of these zones which are
associated with the 1300 metre long I.P. zone. Both the
I.P. zone and the mineralized zones remain open along
strike. With the length and mineralization found to
date in the early stages of exploration on the Cash
property, the company is encouraged by the potential.
