BIG I DEVELOPMENTS LTD. (BID-V)

HIGH GRADE ISKUT GOLD PROJECT ACQUIRED- Big I Development has acquired an option from CONSOLIDATED SILVER STANDARD MINES LTD. to earn up to a 50% interest in the Haida mineral claim in the Bowser River Area, 30 km north of Stewart, B.C. The Haida claim, formerly the Portland-Tide Lake group, was staked in 1928 by Alphonse Thomas of Stewart, B.C. Silver Standard optioned the property in 1961 and re-staked the Haida claim in 1967. Fieldwork includes two short adits and some open cuts, limited geological mapping, sampling and geochemical survey about the known mineralized, silicified shear contact zone which has returned many gold values up to 2.80 oz/t. across a 7 foot width. The Haida claim lies within the Catspaw mineral claim recently acquired from by Big I Development from Teuton Resources Corp. Big I has planned an extensive exploration program on both the Haida and the Catspaw mineral claims during 1990.

During the 1989 season Big I continued exploration on the Hop claims covering 5,000 acres in the Dease Lake area, B.C. A 1989 rock trenching program revealed a siliceous zone which returned gold values up to 0.341 oz/t. The Hop property is held under an option agreement from D. Hopper of Vancouver, B.C.

Big I is completing negotiations to acquire the Rock Creek Gold property in Granite County, Montana, U.S.A. The company has performed limited surface work which returned gold values ranging up to 0.3 oz. gold/ton from a zone where numerous quartz veins and stringers occur over a large area.
