KOKANEE EXPLORATIONS LTD. (K00-V)

DRILLING UNDERWAY - Laurence Stephenson, president, Kokanee Explorations Ltd., reports drilling is underway at the Star property located 50 km southwest of Cranbrook, B.C., where BARKHOR RESOURCES INC. (BHO-V) is earning a 50% interest by funding \$600,000 of exploration. Drill hole S-90-1 was drilled at 45 degrees Grid west to intersect a 1,500-foot long electromagnetic anomaly. The hole intersected 35 feet of bedded pyrrhotite sulphide laminae overlying disseminated sphalerite and 1-3% galena in quartzites. From 507.0 to 509.5 feet, a vein of 15% sphalerite, 15% galena and 5% pyrite was intersected, overlying and cutting through a sulphide-bearing tourmaline fragmental. The tourmaline fragmental, vein and bedded mineralization are all associated with Cominco's Sullivan deposit. Kokanee, the operator, is drilling an additional 4,000 feet. Plans to add another drill are under consideration. (SEE GCNL No.812, 26Apr90, P.3 FOR PREVIOUS INFORMATION)
