**GREAT WESTERN STAR DRILL RESULTS - S.R. Ford, P.Eng.,
president, reports**

Lectus Developments Ltd. has received assay results from a \$579,000 winter diamond drilling program on the Great Western Star property near Nelson, B.C. Lectus can earn a 50% interest in the 1 square mile property and REYMONT GOLD MINES LTD. (RMT-Alberta) can acquire the remaining 50%. PACIFIC CENTRAL GOLD CORP. (PSG-V), operator, has an option to earn a 70% interest in the Lectus and Reymont agreements. See table above for selected drill results.

Peter Running, P.Eng., geologist, recommends an additional \$580,000 phased work program with a view to developing a bulk mineable copper/gold deposit with similarities to a porphyry system. Phase I, to start in June, will include surface exploration and diamond drilling to test extensions to known mineralized zones. The second phase would test target zones demonstrating economic potential. (SEE GCNL No.50, 12Mar90, P.1 FOR PREVIOUS RESULTS)
