Reliable Reporting

NO.105(1990)
MAY 31, 1990

WORTHINGTON RESOURCES CORP. (WRC-V)

HOLE NO.	INTERSECTION FEET	GOLD OZ/T	QUEEN CHARLOTTE DRILL RESULTS
90-11	9.0	0.48	Greg Amor, president, reports
90-12	20.0	.31	Worthington Resources Corp.
90-18	5.0	2.3	has received assays from the

1990 drill program on its
southeaster property located
on Graham Island, one of the Queen Charlotte Islands 50
miles off the northwest coast of B.C. The program was
designed to test the nature of the epithermal gold
mineralization, the structural settings and rock types
with associated alteration. SEE TABLE ABOVE. The
diamond drilling confirmed that highly variable gold
values exist in a more complicated structural system
than previously believed.

On completion of the drilling program, a trench was
excavated to explore an area 700 meters north of the
drilling area where in 1999 a float sample returned 0.60
oz.gold/ton.

The trench exposed a 10 foot wide vein with a
strike exposure of 43 feet. Chip samples returned
values up to 1,890 parts per billion gold. Worthington
has acquired an additional 80 units in the region and is
formulating plans for more drilling this summer. (SEE
