POLESTAR EXPLORATION INC. (PSE-V; PSEAF-Nasdaq)

MORE HOLES COMPLETED - Robert Wolfe, vice president, reports Polestar Exploration Inc. has completed a further 18 diamond drill holes on the Crystal Peak garnet deposit near Hedley, B.C. The drilling proved a large high grade zone of 90% garnet with a quarry life of over 20 years. The zone has a

zero stripping ratio. Probable reserves indicate a quarry life of 50 years.

An HQ drill core with a diameter of 2.5 inches produced a representative 5 ton bulk sample. Additional bulk samples are being processed for customer trials in Canada and the U.S., scheduled for early 1991.
