BRYNDEN VENTURES INC. (BNV-T, Alberta)

203-FOOT INTERSECTION - Dal Brynelsen, president,

reports Antelope Resources Inc.

and joint venture partner Brynden Ventures Inc. have intersected 203 feet of visible lead/zinc sulphide mineralization from 687 feet to 890 feet in hole SB-90-2 on the Bluebird claim, part of the 50/50-owned Rossland property located at Rossland, B.C.

Geophysical data indicates the Bluebird/Mayflower mineralized vein system extends for a strike length of 2,300 feet and is open at depth. Initial assay results for a previously undetected sulphide zone intersected from 120.9 to 122.1 feet in hole SB-90-2 returned 0.33 oz. gold/ton, 120.2 oz. silver/ton, 14.5% lead and 7.5% zinc. The current drilling is part of an initial 5,000-foot program designed to test lead/zinc and high grade gold targets on the nearby Southbelt claims. The initial hole of the program, SB-90-1, was lost due to technical problems at 170 feet, well before the projected target depth. (SEE GCNL No. 200, OCT. 16/90, P. 2 FOR PREVIOUS INFORMATION)
