HEDLEY TAILINGS - John Elwell, director, Candorado Mines
PROJECT UPDATE Ltd., and joint venture partner
Cantrell Resources Ltd. report the
Hedley, B.C. tailings project achieved its production
target this year with over 406,000 tons of tailings
being mined, agglomerated and stacked on the leach pad.
These tailings contain an average of 803 parts per
billion of leachable gold, which is equal to 9,500 troy
ounces. Due to low gold prices this year, it was
decided to stockpile production and leach on a slower
scale to recover only enough gold to cover operating
costs. To date, over 2,200 ounces of gold have been
leached from the heaps and, of this, 1,260 ounces have
been poured. About 15 ounces of gold are leaching from
the pile per day. This should continue until freeze up.
