TAYWIN RESOURCES LTD. (TYN-V)

MERRY WIDOW UPDATE - J. Donald Graham, president, Taywin Resources Ltd., provides an update on activities at the Merry Widow property, located near Port McNeill, northern Vancouver Island, B.C. **MORANDA INC.** can earn a 51% interest by paying \$225,000 and spending \$225,000 over two years. Moranda has completed a 20-km grid covering the contact between the Coast Copper diorite intrusion and the bonanza formation. Soil samples have been taken on the grid and an induced polarization survey is underway. Drilling is expected before year-end. The underground workings were recently inspected which revealed minimum work would be required

to re-establish operations. The workings are stable and well ventilated. Ore drawpoints require drilling and blasting to remove large hung-up blocks prior to removal of the remaining broken ore.

The mine was designed to extract magnetite; however, drilling last year verified that gold-bearing sulphides were left on the upper of the stope. Sulphides are present in ore left on the floor of the drawpoint where a sample was taken. The north end of the main sublevel 200 feet above the drawpoints was inspected and sampled. Assays are pending.

Near Taywin's Electrum property, also on Vancouver Island, **PLACER DOME INC.** dropped its option on a Taywin claim due to disappointing results. (SEE GCNL No.139, 19Ju190, P.3 FOR EARLIER INFORMATION)

NORTH LILY MINING CO. LTD. will control about 59.3% of the outstanding votes. (SEE GCNL No.194, OCT.5/90, P.3 FOR PREVIOUS INFORMATION)
