DOROMIN RESOURCES LTD., (DOI-V)

NEW MINERAL SHOWING FOUND - Marino Specogna, director,
reports Doromin Resources

has discovered a new mineral occurrence within an
alteration system on the 100%-owned Cimadoro property
located on Moreby Island, Queen Charlotte Islands, B.C.

Recent galena lead isotope readings taken on samples
from the main showing have returned values correlating
with values of known Paleozoic Sicker Formation
mineralization. The Sicker Formation is known to host
polymetallic deposits on Vancouver Island to the south.
Doromin's geological consultant is preparing a property
evaluation report. (SEE GCNL No.141, 23Jul90, P.1 FOR
PREVIOUS DATA)
