		19.60 - 22.4	2.8	.061
		28.60 - 30.11	1.5	.064
		46.12 - 46.77	.55	.038
W-90-4	030/60	55.13 - 56.20	1.07	.082

FINAL WARATAH - John Barclay, director, Big M Resources, DRILL RESULTS reports the final assays have been received from the Waratah property located in the Iskut River area about 70 miles northwest of Stewart, B.C. Big M can earn a 50% interest from Royal Bay Gold Corp., formerly Tungco Resources Corp., by spending \$500,000 over three years. The drilling focused on the Cooper occurrence; see table above. Drill holes W-90-2 and 5 obtained geochemically anomalous gold intervals. Holes W-90-6 and 7 returned anomalous values and did not intersect the Cooper structure. Further results from the surface program indicated the possibility of a parallel mineralized structure 1,200 feet to the northeast where a narrow shear vein assayed 0.363 oz.gold/ton. A sample of angular float from the same area returned a value of 0.446 oz.gold/ton. Further work is planned next year depending on construction of the Gov't access road.
